
Norm's News & Notes

July 28, 2011

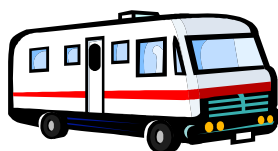

Drinking Water: The Annual Drinking Water Quality Report has been distributed. The DEP was out and took samples again. All was OK. On Saturday, July 23, Ron Shaw implemented the DEP approved monthly flushing plan. David Kingsbury, our licensed operator, took samples at each of the designated flushing locations. Each sample was well within the DEP's guidelines.

Sewer Plant: We have received about 2 ¼" of rain over the past few days. We are happy to report that we have not seen an increased flow into the sewer plant. Therefore, it appears that we have made good progress on our infiltration issue. The lake is up 1.2".

Employees: Joe Webster has taken a full time job with another employer. Joe will be missed. Charley Swansey has agreed to do the daily maintenance items when Bill has scheduled days off.

RV Storage Area: Commercial motion sensor flood lights have been installed to increase security.

Online Campground Reservations: We are putting this project on hold until the November timeframe, when the Campground Committee will resume.

Campground: Two separate camping groups, approximately 18 RVs, came in the weekend of 6-10. One of the groups came back the weekend of 7-8. F Bath has been painted inside and out, thanks to Rich Patton. Pantries on sites 1-35 have been power washed to remove the cocoons. The balance will be done shortly. The Hernando Visitor and Convention Center sent us 300 leads. We mailed out our brochure with a cover letter. This may lead to future business in the campground.

Enhancing the motorhome lifestyle!

We are checking with FMCA to determine what the fee would be for a vendor booth at the Southeast Area Convention held at the Brooksville Airport February 1-5, 2012.

We are currently considering purchasing space for a campground advertisement in Coachmen Owners Association Campground Directory. COA distribution is over 12,000 directories.

Maintenance: We needed a new clutch in the tractor which cost approximately \$1,200. Both golf carts were serviced. New tires, a fuel problem, a starting problem and other adjustments were addressed. Heavy metal was taken to recycling and \$150 was received.

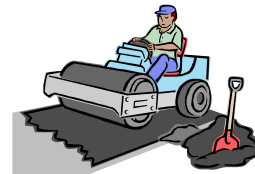

Fishing Regulations: Due to problems with outside individuals coming into the park to fish in Lake Sparkman, a resolution was passed at the July 19, 2011 Business Meeting that outsiders must be accompanied by a unit owner/camper. The reason for the resolution is to limit our liability in the event of an accident.

Fishing Rules

- Non-owners must be accompanied by unit owner/camper at all times – NO EXCEPTIONS.
- Non-owner fishing permitted from DOCK only.
- All Florida Fishing Regulations must be followed.
- No boat launching except by unit owners/campers.
- No standing on dock railings.
- Catch & release fishing recommended.

Paving: At the July 23 Business Meeting, the Board approved and hired Boss Asphalt to pave the campground pads and several other areas. They have agreed to do paving for individuals who may want paving done while they are on site. They will be in the park around August 15. Anyone interested in getting estimates should contact Tom or Norm.

Did you know??????

That a water leak about the diameter of your little finger (1 gallon per minute) will leak 525,600 gallons of water in a year.

Baths use 3 times more water than showers. Use a low flow showerhead and take short showers (5 minutes or less) instead of baths.

An average of 4 gallons per minute are wasted by a leaky toilet. Check your toilet for leaks and repair any you find.

That water saving devices are available free of charge in the office at Camper's Holiday.
